HOW TO PLAY: CALCUDOKU

Fill the grid using arithmetic cage constraints.

4 puzzles · one per page · every solution printed

RULES

1. Fill each row and column with the digits 1 through N exactly once.
2. Each outlined cage shows a target number, plus an operation (+, -, x, /) if the cage holds more than one cell.
3. The digits in the cage must produce the target using that operation.
4. Digits may repeat within a cage only if they are in different rows and columns.

7+	4	7+	2
1		2	
6+	1	4	7+
	2		

Two cells are already worked out - the rest are yours.

PRO TIP

Single-cell cages give you the answer directly. For two-cell cages, list all digit pairs that produce the target — then cross-reference with row/column constraints.

COMMON MISTAKES

- Forgetting that digits cannot repeat within a row or column, even across cages.
- Ignoring the operation sign — subtraction and division are order-dependent.

PUZZLE #1

Easy

7+		7+	2
2			8+
1	10+		
		3	

PUZZLE #2

Easy

4+		4	2
2	3	7+	
7+	4		7+

PUZZLE #3

Medium

9+			8+	
6+		4		12+
7+		9+	5	
	4			
	7+		3	1

PUZZLE #4

Hard

48x	11+	80x		3	600x
			13+		
17+	5				2
		19+		1	3
3				2x
