HOW TO PLAY: SHIKAKU

Divide the grid into rectangles matching the numbers.

4 puzzles · one per page · every solution printed

RULES

1. Divide the entire grid into non-overlapping rectangles.
2. Each rectangle must contain exactly one number.
3. That number equals the area (width x height) of its rectangle.
4. Every cell must belong to exactly one rectangle.

			2	6	
		3	4		
		3		3	3
6	6				

Two rectangles are already worked out - the rest are yours.

PRO TIP

Numbers that can only form one rectangle shape are your starting point. For example, a 2 must be 1x2 or 2x1. A prime number like 3 can only be 1x3 or 3x1.

COMMON MISTAKES

- Creating rectangles that overlap or leave gaps.
- Forgetting that every cell must belong to exactly one rectangle.

PUZZLE #1

Easy

2				2	2
2	2	3	3		
				2	
			3	3	
	6	3			3

PUZZLE #2
